

Dimension SwifTestTM for Oracle Fusion Cloud Applications

NDEVR

Test automation for Oracle Fusion Cloud Applications

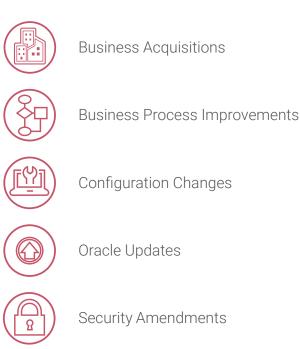

DWS can significantly reduce the time and effort associated with functional testing using Dimension SwifTest™ for Cloud Apps. Savings of up to 60% can be realized during test execution, with further savings of 70% achievable during the creation and maintenance of test scripts.

Accelerate and improve the quality of any ERP change event project

Dimension SwifTest for Cloud Apps has been designed with the non-technical end user in mind to make the creation, editing, scheduling and execution of testing as simple and efficient as possible. A dashboard provides a comprehensive view of all testing activity undertaken. Test managers and lead testers can view the progress, and results, at a project or scenario level. For more forensic analysis, users can drill down to the finite detail of individual tests.

Key features include:

- Tests scripts are granular and comprise individually editable actions
- End-to-end processes can be tested by combining scripts
- Datastores allow tests to consume, or be driven by, fixed or variable data
- The client used to create scripts is application-aware
- Custom pages are supported
- Any project can be tested, including regular 90-day patching cycles
- The burden of testing is eased by automation

NDEVR

Test your system, not your patience

Allows you to create granular tests and then, using **Test Queue** functionality, lets you combine these to test end-to-end processes.

C Enables **Business Analysts** and Super-Users to build and automatically execute test scripts.

Increases productivity through soft-coding and the use of Datastores to **intelligently and automatically** run tests

> The Scheduler enables users to submit

test scripts in

unattended mode.

 \bigcirc

Native integration

with Oracle Cloud Applications; eliminates the need to know Java, C++ or HTML tags.

Uses **Repository and Dynamic Datastores** to handshake between tests; enabling you to test end-to-end business processes (e.g. "Procure to Pay") including batch jobs.

Oracle Fusion Cloud Apps testing, made easy

The Dashboard aggregates and presents all test related statistics in a user friendly manner.
